

Fellowship & Training Course in ART

Clinical & Embryology

INDIRA FERTILITY ACADEMY

Dr. Kshitiz Murdia

CEO : Indira IVF Group

The current training scenario in ART across the world is of observation based, which although gives gynaecologists a fair idea of how the procedure is being done but does not give you the confidence of performing it independently. We at Indira Fertility Academy have a Simulator based training for them so that they have an ease of being in a relaxed environment and protect patients' rights and privacy.

The reproductive medicine fellowship course gives you in-depth understanding of the entire ART process right from patient selection, pre cycle evaluation, selecting best protocols for stimulation & planning their entire cycle till the embryo transfer. The course is made for gynaecologist who want to refine their skills or want to make their career in the field of ART.

Dr. Nitiz Murdia

Co-Founder & Director : Indira IVF Group

Embryology lab is the heart of IVF treatment cycle. Seventy percent of patient's success depends on the quality of embryo which boils down to the skill level of embryologist. The efficiency of an embryologist is judged on how efficiently they use the technology by maintaining pH, temperature, osmolarity of the media and minimize the gamete handling time outside an incubator in order to provide an ideal culture condition for oocytes to transform into beautiful embryos or blastocyst.

Indira Fertility Academy's Embryology course focuses on the applied procedure part which is useful for young Embryologist to understand which are critical parameters for embryo growth and how to maintain those parameters in your lab.

Dr. Vipin Chandra

**Chief of Clinical and Lab Operations
Indira IVF Group**

At a prevalence of 10-15% around 32-35 million couples in India are suffering from infertility issues. Out of which almost 7 million couple needs IVF treatment however our current infrastructure in India can serves approx. 1-2 lacs couples per year who need IVF treatment, and only 3-4% from the pool of gynaecologists are performing IVF procedures. Considering this unmet need, there is an immense requirement of training courses to groom our upcoming / practicing gynaecologists to provide fertility care. These various courses are designed in a way to meet all the demands of various group of aspirants, who wish to pursue their careers in ART. I wish good luck to all the aspirants.

Dr. Nihar Ranjan Bhoi

**Head of Training and Academics
Department of Reproductive Medicine
Indira Fertility Academy**

Dear All,

Greetings from Indira IVF..!!

There is a huge scarcity in number of available reproductive medicine consultants pan India. After taking the feedbacks from the trainees across India, we have designed these courses keeping the need of different group of clinicians as per experience and preference. The key highlights of these courses are : (1) academics through Industry Experts (International & National faculties), (2) Best in industry hands on exposure, (3) High number of case-load, (4) all possible variety of patient exposure, and (5) opportunity to be involved in clinical research. After completion of this fellowship course (1 year), the candidate will be professionally eligible to practice independently.

Dr. Ritesh Aggarwal

Head of Training & Academics
Embryology & Andrology
Indira Fertility Academy

At IFA, we provide our students with the state-of-the-art facilities to explore the endless possibilities in the field of embryology. We prioritize the needs of each of our students, thus instilling in them an in-depth knowledge of the practical and theoretical aspects of all embryology procedures. After successful completion of the course, the aspiring embryologists will step out into the world as highly skilled clinical embryologists.

We ensure to educate through scientific presentations, research work, quality accreditations and self-assessments to help them diversify their horizons.

About Indira Fertility Academy

Indira Fertility Academy (IFA) is the academic wing of IIHPL, set up with a vision to develop and groom talent for fertility treatment. The Academy has access to some of the world's greatest scholars and educators from the fertility treatment across the globe. IFA brings together inspiring and experienced faculties from across the globe that train and teaches learners to challenge conventional thinking and create an enriching future for themselves in the field of IVF.

Why Choose Indira Fertility Academy

01

IFA has trained more than **350+ Fertility Doctors** including **20+ candidate** from **overseas countries**

02

Trained more than **200+ Embryologists** to a competency level of independent practice in ART

03

The Clinical infra is equipped with advanced scan trainers (USG simulator), a versatile cloud-based simulator with **1500 case modules** to explore.

04

The training faculty consists of Senior Doctors who have experience of doing more than **1,00,000 IVF cycles.**

05

Virtual reality-based Simulators from Medaphor are convertible (The same simulator can be converted to perform either Hysteroscopy/Embryo Transfer) and is loaded with numerous case modules that support adequate orientation before handling a live cases.
